1 [A methodology for performance evaluation of systems with large emulation code](#)

Humayun Khalid

June 1999 **ACM SIGARCH Computer Architecture News**, Volume 27 Issue 3

Full text available:  [pdf\(428.18 KB\)](#) Additional Information: [full citation](#), [abstract](#), [index terms](#)

Emulation affects accurate performance evaluation of applications running on the present generation of computing machines. The emulation code from present generation of machines is often passed onto the traces which when used for the trace-driven performance evaluation of the next generation of architectures results in highly incorrect evaluations. The scenario captured by the trace may be real. However, one major problem associated with such a reality is that if such traces are used for future ...

**Keywords:** benchmarking, emulation code, performance evaluation, simulation

2 [SoftGenLock: active stereo and genlock for PC cluster](#)

J  r  mie Allard, Val  rie Gouranton, Guy Lamarque, Emmanuel Melin, Bruno Raffin

May 2003 **Proceedings of the workshop on Virtual environments 2003**

Full text available:  [pdf\(1.10 MB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

In this paper, we present SoftGenLock, an open source software that enables genlock and active stereo on commodity graphics cards. SoftGenLock is implemented on top of Linux. It does not require any hardware modification of the graphics card. Rather than to gain total control on signal generation, which would make the software deeply dependent on the graphics card specification, SoftGenLock applies continuous small modifications to converge and maintain genlocked video signals. To be properly sy ...

3 [Performance evaluation of two operating systems](#)

Humayun Khalid

June 1999 **ACM SIGARCH Computer Architecture News**, Volume 27 Issue 3

Full text available:  [pdf\(248.78 KB\)](#) Additional Information: [full citation](#), [abstract](#), [index terms](#)

This report compares the performance of two radically different versions of MacOS&trade; operating system. In particular, we are interested in the study that focuses primarily on the emulation code related aspect of the performance of two version of the aforementioned operating system. ALPS (Application Level Performance Measurement Suite) benchmarks [1] were used as test cases due to the fact that they contains scenarios which stresses the operating system (OS) related activities.

**Keywords:** emulation, operating systems, performance evaluation

- 4 [PortOS: an educational operating system for the Post-PC environment](#)  
Benjamin Atkin, Emin Gün Sirer  
February 2002 **ACM SIGCSE Bulletin , Proceedings of the 33rd SIGCSE technical symposium on Computer science education**, Volume 34 Issue 1  
Full text available:  [pdf\(483.37 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#)

In this paper, we describe PortOS, an educational operating system designed to complement undergraduate and graduate level classes on operating systems. PortOS is a complete user-level operating system project, with phases covering concurrency, synchronization, networking and file systems. It focuses particularly on ad hoc and peer-to-peer distributed computing on mobile devices. This paper discusses alternative approaches to operating system projects, and presents our particular design point at ...

- 5 [Running Linux on a Laptop](#)  
Erik Max Francis  
October 1999 **Linux Journal**  
Full text available:  [html\(10.15 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

A quick look at what to look for in a laptop for Linux and how to set it up

- 6 [Networking non-network applications](#)  
David Doss, Bill Swafford  
March 1991 **ACM SIGCSE Bulletin , Proceedings of the twenty-second SIGCSE technical symposium on Computer science education**, Volume 23 Issue 1  
Full text available:  [pdf\(460.84 KB\)](#) Additional Information: [full citation](#), [references](#), [index terms](#)

- 7 [Operating systems: Running on the bare metal with GeekOS](#)  
David Hovemeyer, Jeffrey K. Hollingsworth, Bobby Bhattacharjee  
March 2004 **Proceedings of the 35th SIGCSE technical symposium on Computer science education**  
Full text available:  [pdf\(103.18 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Undergraduate operating systems courses are generally taught using one of two approaches: *abstract* or *concrete*. In the abstract approach, students learn the concepts underlying operating systems theory, and perhaps apply them using user-level threads in a host operating system. In the concrete approach, students apply concepts by working on a real operating system kernel. In the purest manifestation of the concrete approach, students implement operating system projects that run on ...

- 8 [Development of processors and communication networks for embedded systems: System design methodologies for a wireless security processing platform](#)  
Srivaths Ravi, Anand Raghunathan, Nachiketh Potlapally, Murugan Sankaradass  
June 2002 **Proceedings of the 39th conference on Design automation**  
Full text available:  [pdf\(207.37 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

Security protocols are critical to enabling the growth of a wide range of wireless data services and applications. However, they impose a high computational burden that is mismatched with the modest processing capabilities and battery resources available on wireless clients. Bridging the security processing gap, while retaining sufficient programmability in order to support a wide range of current and future security protocol standards, requires the use of novel system architectures and design m ...

9 Kernel Korner

Joseph Pranevich

April 1999 **Linux Journal**

Full text available:  [html\(18.76 KB\)](#) Additional Information: [full citation](#), [abstract](#), [index terms](#)

Linux 2.2 and the Frame-Buffer Console: Wondering about the new frame-buffer features in the kernel? Mr. Pranevich gives us the scoop

10 Implementation aspects of a SPARC V9 complete machine simulator

Bill Clarke, Adam Czezowski, Peter Strazdins

January 2002 **Australian Computer Science Communications , Proceedings of the twenty-fifth Australasian conference on Computer science - Volume 4**, Volume 24 Issue 1

Full text available:  [pdf\(1.33 MB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

In this paper we present work in progress in the development of a complete machine simulator for the UltraSPARC, an implementation of the SPARC V9 architecture. The complexity of the UltraSPARC ISA presents many challenges in developing a reliable and yet reasonably efficient implementation of such a simulator. Our implementation includes a heavily object-oriented design for the simulator modules and infrastructure, caching of repeated computations for performance, adding an OS (system call) emu ...

**Keywords:** SMP, SPARC V9 ISA, UltraSPARC, complete machine simulator, execution-driven simulation, object-oriented design

11 Bochs: A Portable PC Emulator for Unix/X

Kevin P. Lawton

September 1996 **Linux Journal**

Full text available:  [html\(21.09 KB\)](#) Additional Information: [full citation](#), [index terms](#)

12 Animation with CINEMA

Trevor Miles, Randall P. Sadowski, Barbara M. Werner

December 1988 **Proceedings of the 20th conference on Winter simulation**

Full text available:  [pdf\(926.62 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

Cinema is a general purpose animation package designed to work intimately with the SIMAN simulation language. Cinema consists of two parts. The first, called CINEMA, is used to define the graphical images used in the animation. The second, called CSIMAN, is used to execute the animation. Both programs have a user-friendly graphical interface which does not require any programming. Cinema is available on microcomputers as well as Sun, VAX, and Apollo workstations.

13 Designing and implementing the do-everything LAN

D. Panagopoulos, S. Bahr

October 1989 **Proceedings of the 17th annual ACM SIGUCCS conference on User Services**

Full text available:  [pdf\(565.24 KB\)](#) Additional Information: [full citation](#), [index terms](#)

14 Fast detection of communication patterns in distributed executions

Thomas Kunz, Michiel F. H. Seuren

November 1997 **Proceedings of the 1997 conference of the Centre for Advanced Studies on Collaborative research**

Full text available:  [pdf\(4.21 MB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Understanding distributed applications is a tedious and difficult task. Visualizations based on process-time diagrams are often used to obtain a better understanding of the execution of the application. The visualization tool we use is Poet, an event tracer developed at the University of Waterloo. However, these diagrams are often very complex and do not provide the user with the desired overview of the application. In our experience, such tools display repeated occurrences of non-trivial commun ...

15 Pen computing: a technology overview and a vision

André Meyer

July 1995 **ACM SIGCHI Bulletin**, Volume 27 Issue 3

Full text available:  [pdf\(5.14 MB\)](#) Additional Information: [full citation](#), [abstract](#), [citations](#), [index terms](#)

This work gives an overview of a new technology that is attracting growing interest in public as well as in the computer industry itself. The visible difference from other technologies is in the use of a pen or pencil as the primary means of interaction between a user and a machine, picking up the familiar pen and paper interface metaphor. From this follows a set of consequences that will be analyzed and put into context with other emerging technologies and visions. Starting with a short historic ...

16 Linux Command Line Parameters

Jeff Tranter

December 1994 **Linux Journal**

Full text available:  [html\(13.91 KB\)](#) Additional Information: [full citation](#), [abstract](#), [index terms](#)

Passing command line parameters to the kernel during system startup solves some programmers' testing problems.

17 The end of the CRT?

Bob Myers

May 1997 **ACM SIGGRAPH Computer Graphics**, Volume 31 Issue 2

Full text available:  [pdf\(317.09 KB\)](#) Additional Information: [full citation](#), [abstract](#), [index terms](#)

Several technologies are becoming serious challengers to the time-honored cathode ray tube (CRT) as the display of choice for desktop use. This shift alone will have an impact on graphics hardware and software, but there are potentially greater changes on the horizon as these displays move off the desktop. This article examines the transition away from the CRT display, the changes this transition will demand from the rest of the computer system and what might be enabled by these new technologies ...

18 Highly Scalable Dynamically Reconfigurable Systolic Ring-Architecture for DSP Applications

G. Sassatelli, L. Torres, P. Benoit, T. Gil, C. Diou, G. Cambon, J. Galy

March 2002 **Proceedings of the conference on Design, automation and test in Europe**

Full text available:  [pdf\(2.02 MB\)](#)  Additional Information: [full citation](#), [abstract](#)  
[Publisher Site](#)

Microprocessors are today getting more and more inefficient for a growing range of applications. Its principles -The Von Neumann paradigm[3]- based on thesequential execution of algorithms will no longer be able to cope with the kind of highly computing intensive applications of multimedia world. Nowadays approaches to deal with these limitations consist in the following:- The first, and most natural way to increase the computing power is obviously to decrease the cycle execution time, thanks to new sil ...

19 Very rapid prototyping of wearable computers: a case study of custom versus off-the-shelf design methodologies

Asim Smailagic, Daniel P. Siewiorek, Richard Martin, John Stivorc

June 1997 **Proceedings of the 34th annual conference on Design automation - Volume 00**

Full text available:  [pdf\(121.36 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)  
 [Publisher Site](#)

The Wearable Computer Project is a testbed integrating research on rapid design and prototyping. Based on representative examples from six generations of wearable computers, the paper focuses on the differences in rapid prototyping using custom design versus off-the-shelf components. The attributes characterizing these two design styles are defined and illustrated by experimental measurements. The off-the-shelf approach required ten times the overhead, 30% more cost, fifty times the storage resources, 20 ...

20 [A multi-purpose toll collection plaza model](#)

Andrew J. Junga

December 1990 **Proceedings of the 22nd conference on Winter simulation**

Full text available:  [pdf \(561.92 KB\)](#) Additional Information: [full citation](#), [references](#), [citations](#), [index terms](#)
